Online Food Ordering System

ABSTRACT

Online food ordering management system is a software used to ease the customer's life. Sometimes you don't feel like cooking or don't feel like going to the restaurants, therefore we here propose an Online Food Ordering Management System which can help the customers to get food delivered immediately. This is mostly designed for a single restaurant having various food items at a valuable food price. It gives an effective way to order your food and almost within no time food will be delivered. Customer, he/she has a login form with password in order to secure the information details and then they can select his/her favorite food items, place the order, also mention the quantity and finally can make the payment. When the order is placed, it gets stored in the database of the restaurants and then the staff go through the orders and process it efficiently.

INTRODUCTION

Nowadays, every technical field is trying to style human life at ease. The past couple years there has been enormous growth of internet restaurants. It's just a single window for ordering from a varied series of restaurants. Basically, ''Online Food Ordering System" can be defined as a simple and convenient way for the customers to purchase food online, without having to go to the restaurant. This system is very useful to those who are very busy at work or at home and do not have the time to go outside or cook the food. Customers don't really need to have technical knowledge to operate it. Because it is designed in a very modest way. It provides a complete dashboard with information about menus, orders, etc. This system can be used in any online food industry. In short, it's easy, convenient, completely transparent food software and also customer-friendly online ordering system.
